

COSMO

Business One-Pager | Experimental AI Brain

Start Small. Learn Continuously. Grow Smarter. Stay Efficient.

WHAT IS COSMO?

COSMO is an experimental AI brain designed to learn continuously from experience, preserve prior knowledge, selectively activate cognitive functions, and grow internal structure when additional capacity is needed.

THE QUESTION

What if useful AI capability could be accumulated instead of installed upfront?

COSMO investigates a developmental alternative: begin with a relatively small cognitive structure and progressively learn, remember, adapt, and grow.

VERIFIED PROOF

1 COSMO	1,000 / 1,000 concepts	Retention 1.0 / 1.0 / 1.0	323.212 MB*
Stability PASS	Plasticity PASS	Held-out Transfer PASS	Restart Continuity PASS
Structural Growth PASS	Novel Action Concept PASS	Persistent Memory PASS	Selective Cognition PASS

*323.212 MB is the measured complete persistent COSMO_M brain package, not model weights alone.

WHY IT MAY MATTER

COSMO explores whether useful capability can accumulate through persistent experience rather than requiring all capability to exist at the starting point. If validated across real workloads, this could create a different infrastructure model for some persistent, edge, on-device, robotic, or autonomous AI applications.

This is a business and engineering hypothesis to be benchmarked - not a demonstrated cost-saving claim.

POTENTIAL APPLICATIONS

On-Device AI
Edge AI
Personal Persistent AI
Robotics / Embodied AI
Autonomous Systems

These are target environments, not currently validated deployment claims.

BENCHMARK ROADMAP

Total task cost
Latency
CPU / GPU utilization
RAM / VRAM
Power
Persistent memory cost
Continual-learning cost
External AI / API dependency

CURRENT STAGE

Experimental Research System - Active Development. COSMO is not presented as AGI, a finished general-purpose AI product, or production-ready technology. Current evidence supports specific tested capabilities; it does not establish unlimited continual learning, human-level cognition, broad natural-language understanding, or real-world long-term stability.

Evidence discipline: Implemented -> Tested -> Verified -> Long-term Validated. These are not treated as equivalent claims.

TRANSACTION & COLLABORATION OPPORTUNITIES

Investment | Technology Licensing | Technology Transfer / Sale | Acquisition | Strategic Partnership & Commercialization

Technical due diligence or focused proof-of-concept validation can be discussed with serious interested parties.

PUBLIC DISCLOSURE PRINCIPLE

Results First. Direction Visible. Mechanism Protected. Claims Evidence-Bounded.

Detailed internal mechanisms, thresholds, growth policies, and implementation logic are intentionally excluded from public materials.
